

Benzapon Pre

Special pre-brushing agent for textiles which are cleaned in hydrocarbon solvents

- Properties:**
- adjusted to the special requirements of hydrocarbon solvents
 - high water-binding capacity
 - clearly miscible with HC solvents in any ratio
 - rinse out easily in HC solvents
 - no greying on pre-brushed areas

Application: Benzapon Pre is brushed pure onto the soiled areas of the textile.

Applying water in the pre-spotting a basic concentration of drycleaning detergent in the liquor has to be taken into account to avoid local greying.

Garments which have undergone pre-spotting treatment must be cleaned in the machine at the very latest after 30 minutes of product action time. Substantially longer reaction times can lead to material damage.

Be careful when using this product on delicate garments. In case of doubt (especially in case of poor color fastness) we recommend to carry through a hem test.

Technical Data:

Density 20 °C (68 °F)	0.88 g/ml
pH-value	6.5 - 7.5
Ionogenity	anionic

Hints:

Storage

Store containers cool and tightly closed. The product can be stored for at least 24 months in its original sealed packing.

Comment

Hydrocarbon solvent degrades the skin heavily, this may lead to allergic reactions. We recommend to wear protective gloves during the pre-brushing process with HC-containing pre-brush-solutions.
